Type-In Tracking Code

For openCart 3.0.x

Installation Instructions

Works with openCart 3.0.x

1. Either download the .zip and upload it in *Admin > Extensions > Installer*, or install directly from *Admin > Marketplace*
2. Refresh modifications in *Admin > Extensions > Modifications*
3. In *Admin > Extensions > Modules*, click **Install**, then **Edit**, configure and Enable

To uninstall:

1. In *Admin > Extensions > Modules*, click **Uninstall**
2. Delete entry for .zip in *Admin > Extensions > Installer*
3. Refresh modifications in *Admin > Extensions > Modifications*

For technical support please email opencart@phpgods.net with you site information and admin access. Include your FTP account information. The module is supposed to work with original openCart, and even though compatibility issues are very unlikely to occur, there is no guarantee that it will work with other extensions, modules, modification or themes.

This module is included in Affiliate Pack X and is compatible with all extensions in the pack.

PLEASE DO NOT POST SUPPORT REQUESTS IN THE OPENCART.COM PAGE COMMENTS!

User Guide

If your Default Theme is not in */catalog/view/theme/default/* directory, you might need to copy template files */catalog/view/theme/default/extension/module/tracking_input_default_column.twig* and */catalog/view/theme/default/extension/module/tracking_input_default_row.twig* into */catalog/view/theme/<your_theme_directory>/extension/module* directory.

With this extension your affiliates have alternative way to refer users to your site. Their referrals don't have to click links with the tracking code. They can type-in the code into the text input box, provided by the module, and / or, if allowed in admin, into regular Coupon input. Also, when affiliates fill in registration form, they can come up with their own tracking code. This code can be shorter and easier to type and remember than the code generated by regular openCart functionality.

The tracking input text box is a highly configurable layout module. Like any layout module, you can use it in any layouts in any position provided by layout. Appearance can be completely customized, you even can edit HTML and php source code for the module template, have as many different templates as you need and use different templates in different places. You also can control when the module is displayed and when it's hidden.

You can find complete explanation of all settings and configuration on the module edit page in admin - *Extensions > Modules > Tracking Input > Edit* .

When affiliates choose tracking code during registration, the extension prevents the code from being used more than once and checks that it's no longer than 20 characters and contains only lower case letter, digits, dash and underscore.

You can also choose not to allow affiliates to come up with their own tracking code and / or not to edit it later.

This module can be very useful for offline marketing and any kind of promotion where passing web links is not an option. In combination with Tracking Discount module it becomes very powerful – for example, your affiliates will be able to print their tracking code in booklets or flyers and advertise a discount to those who type in tracking code on the site. Both this module and **Tracking Discount** module are available in a bundle with $10 discount.
